

Powder coated case gives exceptional corrosion resistance.

European lockcases are simplified for door preparation and lock interchangeability to suit changes in use.

Single piece square ended forend in grade 304 stainless steel, simplifies preparation of doors. Optional round ended forend is also available.

Quick reverse latch for left and right hand applications allowing quick trouble free on-site handing without the need to dismantle the lockcase.

Smooth action 8mm square follower provides smooth lever operation and reduces wear and tear which can lead to lever droop.

20mm Steel nickel plated double throw bolt from 2 turns of the cylinder offers high levels of physical security on sashlock and deadlock variants.

Sash lock has cylinder and latch function where both latch and deadbolt can be withdrawn by cylinder key or thumbturn.

Conforms to the dimensional characteristics of DIN 18251 with follower to cylinder centres at 72mm (78mm for bathroom lock). The case is pierced to accept bolt through fixings at 38mm (up to 51mm) centres at the follower and the cylinder position.

Guide cylinder screw accurately aligns the fixing to the cylinder.

Conforms to European Standard EN 12209
